-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Drawings***

1. The content of the drawings are approved by the examiner.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(c) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4, 6-8, 12, 15-19, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Kinoshita (6,842,592). Kinoshita teaches a method of operating a printing machine wherein a receiver sheet of a first size is feed to a first position of a fuser roller and than a receiver sheet of a first size is feed to a second position of the fuser roller based on detected temperature (figure 11-12; column 12, line 22- column 14, line 16). The image forming components are controlled to operate so that the image is formed in an appropriate direction so as to allow the receiver sheet of the first size to be fed to a second position of the fuser roller (figure 11-12; column 12, line 22- column 14, line 16).

### ***Claim Rejections - 35 USC § 103***

Art Unit: 2852

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 5, 9-10, and 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kinoshita. Kinoshita does not teach a photoconductor belt and a does not discuss the use of releasing agent with the fuser roller. However, the examiner takes official notice that it is known in the art to use a photoconductor belt and to apply release oil to a fuser roller. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a photoconductor belt and release oil with the image forming device of Kinoshita since a photoconductor belt is functionally equivalent to a photoconductor drum and since release oil allows for easy release of the receiver sheet.

***Prior Art***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tanako et al. and Otsuka teaches pertinent prior art. Rushing teaches a photoconductor belt. Collier et al. teaches a fuser roller using release oil.

***Allowable Subject Matter***

7. Claims 11, 13-14, 20-21, and 23-24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
